Proposal

The Journal of Pharmacy and Nutritional Sciences (JPANS) is inviting you to contribute to this special issue on Medicinal Plants and Phytomedicines aimed at publishing original articles and reviews focusing on documentation of medicinal plants, their phytochemical screening, evaluation of biological activities and pharmacokinetics.

Medicinal plants have evolved over the years and are widely recognized in the treatment and management of infectious diseases, human and animal disorders. The increasing demand for medicinal plants and pharmaceutical health products has renewed interest in the herbal medicine research. In particular, current research on medicinal plants is focusing on their documentation, phytochemistry, pharmacognosy and pharmacokinetics. Researchers have also made an effort to determine the scientific evidence and rationale for the using medicinal plants through various ethnopharmacological evaluations. Therefore, this Special Issue on Medicinal Plants and Phytomedicines will contribute to knowledge on medicinal plants such as:

- Cultivation and collection of medicinal plants
- Isolation and purification of plant secondary metabolites
- In vitro and in vivo biological activities, and
- Pharmacokinetics of herbal medicines

Before submission of full manuscript the authors should carefully read the journal's Author Guidelines, which are located at <http://setpublisher.com/guideline-for-authors/>.
